## Summary

I am seeking an entry-level position as a Junior Python Developer or Trainee. I possess a strong interest in programming and a willingness to learn and grow within a dynamic organization.

## Skills

### Python

- Writing functions and creating classes
- Using Django for web development
- Knowledge of Django REST Framework (DRF)

### DataBases

- PostgreSQL
- MongoDB

### GIT

Version control and collaborative work using GIT

### JavaScript, HTML, CSS

Basic knowledge of JavaScript, HTML and CSS

### Docker

Superficial acquaintance with Docker containers

### PyCharm

Using the PyCharm IDE for Python development

### Big Data Analysis

Experience in analyzing large datasets

### MS Excel

- Creating and managing pivot tables
- Using complex formulas
- Creating and interpreting charts

### English

Intermediate

## Projects

[Forum](#) is a WebAPI application designed to facilitate the connection between startups and investors, supporting Ukraine's economic growth. Developed with Django Rest Framework, it provides a secure platform for startups to showcase their ideas and for investors to discover and engage with these ventures.

My Main Tasks:

- Implemented user Sign In with JWT and added specific user data (ID, first name, last name).
- Created, updated, and validated startup profiles.
- Set up WebSocket for direct communication between investors and startups.
- Implemented notifications for incoming messages in an inactive window.

- Created an industries table and populated it using loaddata.

**[Telegram bot for medication intake](#)**. The bot's functionality is to remind users to take their medications at the specified time. It allows users to input an unlimited number of medications and choose the appropriate time for each drug intake. Once the required number of days is completed, the reminders stop coming. In my opinion, it would be very convenient if doctors could provide this feature when prescribing medications. This bot could be especially beneficial for individuals who need to take a large number of different medications.

## Experience

### Project [Forum](#) Participant

2024.06 - 2024.12

#### SoftServe

Bug fixing and functionality improvement

### Financial Analyst

2019 - 2023

#### SaVService

- Analysis of investment perspectives from cooperation with counteragents
- Calculation of the main financial indicators in current contracts
- Pricing (calculation of the selling price including all direct costs)
- Planning and control of marketing funds
- Quarterly analysis and presentation of the results of the contract activity, assessment of compliance with planned financial indicators and adjustment of conditions based on the results of the business review
- Provision of additional financial calculations to support informed decision-making by trade marketing and business leaders

## Education

### Kyiv National University of Trade and Economics

year of graduation 2013

Finance and Banking - Master

## Courses, trainings, certificates

1. "SoftServe" online courses - "Complete Python Developer Course"

2023.05 - 2024.05

2. "Beetroot Academy" online courses - "Python"

year of graduation 2023

3. "Perspectiva" online courses - "MS SQL"

year of graduation 2021

4. "Laba" online courses - Financial Modeling

year of graduation 2021

5. "Danko" training center - MS Excel at the professional level course

year of graduation 2019
